

## NPIII and Scorecard/Helper version X.0.0.8a (dated 8/12/2026) notes:

### Additions:

Misc Menu has 3 new items:

1. Enter/Edit Injury List
2. Delete Created Lineups (user created lineups)
3. Clear Injury List

**Enter/Edit Injury List addition** is just another way of gaining access to the Injury Grid (for entry/edit).

Previously the only way to gain access to the grid was from the Roster Tab. On the Roster Tab there is a button (Injuries) that is still there, that you would click to enter/edit player injuries. The ability to enter injuries are for those gamers who choose not to follow the actual season injuries, that is, they are following the NPIII Boards for when an Injury occurs.

**Delete Created Lineups addition** allows you to remove all user created lineups. You may want to remove lineups if you were conducting a second replay and did not want to start from scratch, that is the existing database has all of the transaction and roster moves which you don't want removed but you want to remove the lineups that were created by the gamer.

**Clear Injury List addition** allows to clear the injury list. This is similar to the removing of the user created lineups as explained above, you want to create a second replay and want to clear the injury list.

### BUG Fixes:

1. The Import All function had a potential BUG when re-importing all of your game files. The internal ID's that are used to prevent importing a game file twice could get out of sync and reject a future game played (post of calling the Import All function) claiming the just played game was already imported.
2. When Runner on Second (Extra Innings) option is selected, LOB calculation could be incorrect.
3. When Runner on Second (Extra Innings) option is selected, Losing Pitcher of Record could be incorrect.
